NEW!

Flood Cubes

Protection against floods

Your reliable partner in flood protection - no more lugging heavy sandbags!

The Flood Cubes offer protection against floods, can divert water flows and support dams, riverbanks and lakes.

The perfect, immediate and flexible flood protection for everyone!

Governments and associations recommended private precautions, too. Protect your property, your jobs and your community from the devastating effects of flooding.

With SORB® Flood Cubes you are well equipped to protect yourself from the dangers of floods and heavy rain. The application is child's play. A Flood Cube weighs "empty" only 330 grams and absorbs approx. 25 litres within a few minutes, forming a reliable barrier up to a height of 1.20 metres. Storage takes up little space.

Give us a call!

See some application examples:

Private homes, garages and underground garages

Spread out the empty Flood Cubes and secure your private accommodation or public garages from flooding.

Production and storage facilities

Protect your valuable goods and equipment from destruction by strategically placing Flood Cubes in your premises.

Shops and offices, technical or server facilities

Prevent costly damage and disruption to your business operations by using Flood Cubes to control and divert water flows.

Road traffic

Ensure the safety of motorists and prevent traffic chaos by using Flood Cubes to divert water on roads.

Rescue services

Flood Cubes can be used in rescue operations to control water floods and facilitate access to affected areas.

Water utilities and local authorities

Prevent costly damage to infrastructure by shoring up riverbanks and lakes with Flood Cubes to minimise flood damage.

Construction

Create safe working conditions on construction sites by diverting water flows and keeping work surfaces dry.
